

Questions on Autoencoder

What is an Auto-Encoder?

What is a convolutional Auto-encoder?

Which examples for RNN-Autoencoders have we already seen?

How can the losses be formulated?

How can auto-encoders be trained?

What are stacked Auto-encoders? Why do you think this concept is/was useful?

What are sparse Auto-encoders? Why do you think this concept is/was useful?

What are contractive Auto-encoders?

What are De-noising Auto-Encoders? Why are they useful?

How can we visualize high dimensional latent spaces?

What is the idea of tSNE plots?

What is tSNE it good at?

What is tSNE it bad at?

Which alternatives do you know?
