

Questions 1: Unsupervised Learning

1. What is unsupervised machine learning?
2. What do we want unsupervised learning?
3. What are discrete learning tasks?
4. What are continuous learning tasks?
5. Why do we need clustering approaches? Why do we want to cluster data?
6. What is K-Mean Clustering?
7. What is Spectral Clustering? How is it different from k-means clustering? How is it similar?
8. How do outliers affect the clustering behavior in these approaches?
9. What is agglomerative clustering?
10. Which density based clustering approaches do you know?
11. How does mean shift clustering work?
12. How does DBSCAN work?
13. What is the advantage of density-based clustering? What is the disadvantage?
14. How can we assess the quality of a clustering?
15. How can we detect outliers?
