

Questions on Diffusion Models

1. How diffusion models are different from GANs and VAE models?
2. What are Denoise Diffusion Probabilistic Models (DDPMs)?
3. What happens in forward process & backward process of DDPMs?
4. Which architectures are often used to parameterize the diffusion models?
5. What are conditional deep diffusion models?
6. What are the types and few examples on conditional deep diffusion models?
7. What are some famous deep diffusion models?
8. Main challenges in training diffusion models ?
9. What is the role of noise schedule in diffusion models?
10. Advantages of using diffusion models over traditional generative models?
