

Questions on Latent Variable Models

What is Deep Clustering?

What are latent variable models? (VAEs and AEs are examples)

What is the idea behind latent variable models?

How is a latent variable model expressed in terms of likelihoods? (slide 8)

What is the challenge in training latent variable models?

What is the issue with prior sampling?

What is "importance sampling"?

How does importance sampling relate to the principle of the variational approach? (parameterized distribution, slide 21)

Why do we do amortized inference? (Advantages, disadvantages)

What is a IWAE?

What is the VLB or ELBO?

Why is it important for VAEs?
